

Staked

Staked operates highly reliable and secure staking infrastructure for **30+ PoS protocols** on behalf of the leading crypto asset investors in the industry.

Highly Reliable and Secure

We use Kubernetes to distribute across multiple cloud providers, and have never been slashed, hacked or experienced extended downtime in 2+ years of operation.

Non-Custodial

You are always in complete control of your private keys and funds throughout the staking process.

Flexible Go-To-Market

We operate branded public pools, quantized nodes, co-branded and completely white-labeled nodes.

Broadest Asset Coverage

Live on 20+ PoS mainnets including Polkadot, Keep, Tezos, Cosmos, Celo and Livepeer. Operating on 15+ testnets launching in 2020 including Skale, Cardano, Near, NuCypher and Oasis.

Block-Level Reporting

Designed for fund admins and accountants, the reporting is exportable, and includes all staking and delegation transactions.

The Graph (GRT)

The Graph is a protocol for indexing and querying data from blockchains, starting with Ethereum. It decentralizes the query and API layer of Web 3, removing a tradeoff dApp developers struggle with today: whether to build an application that is performant or to build an app that is truly decentralized.

Many Ethereum projects have already built subgraphs including: Uniswap, ENS, DAOstack, Synthetic, Moloch and more.

Key Metrics

Mainnet Launch	12/17/2020
Circulating Supply	~1,200,000,000 (as of 12/17/20)
Inflation	3%
Yield	5% (at 60% stake rate) + query fees
Lock-Up Period:	28 days
Slashing:	None

Token Usage

GRT is a work token that is locked-up by protocol participants (Indexers, Curators, and Delegators) to provide indexing and curating services to the network. Active Indexers, Curators, and Delegators can earn income from the network proportional to the amount of work they perform and their GRT stake.

Consumers will be using a growing set of Indexers by paying for their metered usage using GRT. Indexers will be able to stake Graph tokens (GRT) to participate in the network and earn fees as well as inflation rewards for serving queries.

Token burning in the form of withdrawal taxes and query fees are expected to be around 1%.

Rewards

Total GRT supply at mainnet launch will be 10 billion tokens, and new token issuance in the form of indexing rewards will begin at 3% annually and is subject to future independent technical governance. Assuming a 60% stake rate, expected yield is 5%.

Delegators will also earn a portion of the query fees that consumers pay for. The fee amount depends on demand for queries, the amount of curation signal, and the market rate for blockchain queries.

Risks

There is no slashing risk for delegators.

To unstake, there is a 28 day unbonding period during which your GRT tokens will remain illiquid.

Instructions

*If you are **delegating from a locked contract**, you must follow a separate set of instructions outlined in the [Token Lock Contract Guide](#). There is a helpful [Video Guide for Delegators](#) to go with it. Please contact a Staked representative if you need additional help.

The following instructions require you to have a Web3 wallet such as Metamask or WalletConnect. You will need to be holding GRT tokens in the wallet you are connecting

- 1) Head over to: <https://network.thegraph.com/>
- 2) Connect your Web3 wallet which contains the GRT
- 3) Scroll down to the “Indexers” section and search by ID

Staked’s ID: 0x4d6a8776a164776c93618233a0003e8894e7e6c2

- 4) On the right hand side of the page click on the purple circle with an arrow pointing at a person and choose “Delegate”
- 5) Select the amount you wish to delegate and submit transaction
